*Research on Family Social Support for People with HIV/AIDS (PLWHA) at the Victory Plus Yogyakarta Foundation aims to obtain an overview of emotional support, appreciation support, instrumental support and family information support for PLWHA. This research uses quantitative methods using a descriptive approach. Respondents were collected using a purposive sampling technique with the criteria of being female, aged 19 to 50 years, within the working area of Sleman Regency, Yogyakarta Special Region Province, namely, Tugangan, Plemburan, Umbulharjo, Mrican, and Tegal Panggung, and were recorded at the Victory Plus Yogyakarta Foundation. Data collection techniques use questionnaires and documentation studies. The validity test in this research used construct validity and the instrument reliability test used Cronbach's Alpha. Data analysis uses descriptive statistics, namely by tabulating data, grouping data, editing data, calculating data, and concluding. The results of this research show that in general (76.43%) respondents received social support provided by their families. The percentage of respondents based on the emotional support aspect was 79.25%, the support aspect provided was 78.00%, the instrumental support aspect was 73.75%, and the information support aspect was 74.75%. Instrumental support and information support are in the medium category, so this condition requires increased family social support for PLWHA. The proposed program plan is "Program for Increasing OHIDHA Social Support for PLWHA. This program uses case work and group work methods with case work techniques namely small talk, ventilation, support, and providing advice and counseling. The type of group used in the group work method is an educational group.*
